

HI-RISE

The Hi Rise model is configured to be our most portable unit and is mainly used for high rise construction. The Hi rise is able to fit in construction elevators or through standard doorways and is required on every second floor of a high rise by the Ministry of Labour.

"This unit is the only solution for mid floor work."

The Hi-rise is built on solid steel casters and includes a sling to allow lifting by crane. This unit consists of an enclosed toilet for privacy and an exterior urinal.

Servicing is performed on-site by our trained technicians and includes the cleaning of the restroom, removal of waste from the tank and restocking of supplies as required. We offer flexible service intervals to suit your schedule whether it's daily, weekly, monthly or any other frequency.

Our technicians document all service stops inside the restroom for your review and convenience.

DIMENSIONS

- External 61" X 35" X 91"
