

## STANDARD NON-FLUSH

All units offered by Lacombe Toilet Rentals™ set the industry standard for ease of use and quality construction.

Our Standard Non-Flush model continues to set the benchmark for utility and value. It can be found anywhere from construction sites to special events.

*"Great for most special events and select construction sites."*

The Standard Non-Flush features a single toilet and urinal. Additionally, for special events, we offer the option of pairing it with a hand sanitizer or one of our Handi-Wash stations for a more sanitary environment.

For elevated job sites, the Standard Non-Flush can be outfitted with a sling to allow lifting by crane.

Service is performed on-site by our trained technicians and includes the cleaning of the restroom, removal of waste from the tank and restocking of supplies as required. We offer flexible service intervals to suit your schedule whether it's daily, weekly, monthly or any other frequency. Our technicians document all service stops inside the restroom for your review and convenience.

### DIMENSIONS
